Question: 1

What is one difference between service level software and application level software?

- A. Service level software always provides real-time guarantees on execution time, while application level software does not.
- B. Application level software always forms the core "building bricks" of software systems while service level software is always portable across different hardware.
- C. Application level software provides the functionality and behavior required of the system while service level software provides application-independent functionality.
- D. Service level software always provides the same set of operations regardless of environment, while application level software provide a consistent programming interface.

Answer: C

Question: 2

What is the difference between static and dynamic variables?

- A. Static variables are used to save memory space in lieu of dynamic variables.
- B. Static variables have global visibility while dynamic variables are restricted to individual components.
- C. Static variables have a set value for the lifetime of the program, while dynamic variables can change value as determined by the program.
- D. Static variables exist for as long as the program runs, while dynamic variables are created and destroyed by the program and scoping rules.
