Which area of the network is considered the backbone?

- A. Data center
- B. Core
- C. Distribution layer
- D. LAN access layer

Answer: B

Explanation:

The core is the backbone of the network, a central or common point where traffic flows between users, their workgroups, and shared resources. Most inter-workgroup traffic flows through the core, so it is important that networking devices located in the core introduce little or no delay (latency). Core switches are usually wirespeed , highly available devices.

- D. Check the color of the port LED, which indicates its duplex status (while its blinking indicates speed).

Answer: B

Explanation:

You can use the Mode button to check the duplex mode of each port.

Press the button until the Mode LED displays yellow.
